

THE PRODUCT · PART 2 OF 3

Meet Charlie, the AI copilot for boutique wealth firms.

Built for EAMs and independent advisers. Your advisers ask, Charlie drafts, and your advisers approve.

HOW IT WORKS

Three problems, three modules.

Advisor Co-Pilot

A \$200K account takes the same three hours of reporting as a \$5M one.

Charlie drafts branded portfolio reviews in seconds, ready for sign-off.

Market Signal Tracker

Insider filings are noisy. Routine grants bury the real signal.

Charlie filters SEC, HKEX and SGX filings down to open-market C-suite buys.

Anti-Panic Visualizer

In a drawdown, clients don't need more news. They need context.

Charlie matches historical recoveries to each client's real allocation.

COMPLIANCE

Your advisers stay in charge.

Every output is a draft. Your licensed advisers review, adjust and approve. Charlie holds zero advisory discretion.

Deterministic	Rules and historical data, not model speculation. The same inputs give the same draft.
---------------	--

Isolated	A separate sandbox for each firm, with anonymized CSV or JSON uploads.
----------	--

Governed	AI risk management built in, aimed at the governance bar MAS is setting.
